About me

As a front-end developer, I'm passionate about blending creativity with functionality to build responsive, intuitive, and engaging websites.

Beyond coding, I'm committed to crafting web experiences that not only meet user expectations but elevate them. I'm always on the lookout for new challenges and learning technologies that push the boundaries of what's possible in web development.

Experiences & Projects

Watch shop | Project

This project replicates an online shopping experience focused on selling watches. The application allows users to browse through a curated selection of watches, add items to the shopping cart, and proceed with mock purchases. It demonstrates proficiency in building interactive UI components, managing state across different pages, and implementing basic e-commerce features like product sorting and filtering.

Cryptopia | Project

Cryptopia is a real-time cryptocurrency tracker that fetches data from the CoinGecko API to provide users with up-to-date information about coin prices and more. The app is built with React.js, utilizing hooks and state management to ensure smooth data rendering and updates. Users can view detailed statistics on various cryptocurrencies, and monitor market changes. This project showcases expertise in React development, API integration, and handling dynamic, real-time data flows..

EZ search | Project

The EZ-search project focuses on improving search functionalities with a clean and intuitive user interface. The design leverages advanced CSS features to create a visually appealing, fast, and responsive search experience. The project highlights skills in creating engaging user experiences through fluid transitions,and animations. It's an ideal demonstration of front-end design and development techniques that balance simplicity and functionality.
